

## LIGHTJET PRINTS

We offer two levels of service for Lightjet printing: Direct to Print and Custom. These services are aimed at clients who require high quality archival prints from their digital files. For our Direct to Print service, you have the option to upload your digital files to our web-based FTP or bring them to us in person. See button below to view our requirements for preparing your files for Direct to Print. Custom Prints allow you more control over the final printed image. Your images will include full color management to obtain the highest levels of quality. Test strip at size or 8x10 test included. For additional test prints, refer to our Direct to Print sizes and prices.

The Lightjet 500XL is the world's only 72" wide digital photo printer capable of producing 6ft x 10ft photographic prints in one complete section. These C-type prints, best known for their image depth and smooth, seamless gradations, are printed with a special print process that uses lasers to expose photographic paper which yield photographic exhibition prints of impeccable quality. This exceptional quality means Lightjet laser printing is the number one choice of fine art photographers. For information about recent projects, please take a look at our Did You Know section on our website.

Standard Sizes	Custom	Direct to Print 1-5 prints	Direct to Print 6+ Additional
8x10	\$20	\$10	\$9
